Projects

- Weather App**
Developed and implemented a weather application using HTML, CSS, and JavaScript, leveraging an external API for real-time weather data. The project involved proficiently handling API requests, designing an intuitive user interface, and ensuring seamless display of accurate weather information.
- Smart Lost and Found Management System with Machine and Deep Learning Techniques**
A machine learning-powered web app in Django that tracks lost and found items on campus and returns them to their owners.
- Car Rental Management System**
Car rental system project is a software solution designed to manage the operations of car rental businesses. The system provides a platform for customers to rent cars, view available vehicles, and make bookings. The administrator has a role to view the new bookings and approve accordingly. Tech Stack - php,html,css,javascript.
